Experience

Head of Engineering, Noice

Jan '25 - Aug '25

- Drove growth from 0 to 7 Million micro-transactions and \$1M+ in tips, making Noice the #1 mini app on Farcaster.
- Achieved 1st place in Base Batches #001, winning \$100K in funding out of 77 teams from 97 countries
- Scaled to 5 Million opens by building a “set-and-forget” mini app for micropayments on Farcaster and The Base App

Engineer, KakarotZkEVM

May '24 - Jan '25

- Shipped token faucet to support 600K+ unique visits with Sybil protection, via website and discord bot
- Engineered a tier-gated NFT claiming system integrated with the faucet, driving a 200% spike in volume under 24 hours
- Developed Golang CLI tool for generating Ethereum Execution Layer prover inputs, supporting zkEVM infra

Freelance Software Engineer

Jan '23 - May '24

- Lakme Salon – Developed a networking platform, scaled for 10,000 DAU, using React Native and Redux
- Coinvise – Engineered on-chain purchases as tier gated NFTs, using tRPC, RainbowKit, wagmi and next/auth
- CastMoney – Built a high velocity social trading platform for cryptocurrencies, using NextJS, React Query

Engineering Intern, Devfolio

Feb '22 - Aug '22

- Shipped connect wallet increasing connected Ethereum wallets by 200% using Web3JS, React and Redux
- Built and documented the Content Security Policy, preventing cross-site scripting vulnerabilities using Express & Sentry

Education

Ashoka University

Class of 2021

B.S. (H) Computer Science

Projects

CastMoney

Feb '25

- Launched an experimental social trading client built on Farcaster’s social graph to track follower/following token activity
- Integrated Privy for wallet abstraction, enabling users to view, analyze, and copy trades across their network
- Developed a “Hot Tokens” screener, deployed as a Farcaster mini app, contributing to \$100K in total trading volume
- Sunset product in May 2024 to double down on Noice, following traction and engineering priorities

FollowedBy For GitHub

July '22

- Built a content script based browser extension, which displays your mutual followers on a GitHub profile page
- Ranked in Top 10 on Product Hunt and gained 15+ stars on GitHub within 24 hours of launch
- Developed with VanillaJS, utilizing the native web API for caching requests on client machine – no logs!
- Works without server OAuth, based on the free GitHub follower API, avoiding all rate limiting

Ethereum Foundation – ETHIndia

December '22

- Developed the ETHIndia Hackathon website resulting in 150k pageviews and 7000+ unique applications.
- Streamlined latency to under 800 milliseconds for First Contentful Paint using NextJS (SSR), GraphQL and Web API.

Skills

Languages: JavaScript, TypeScript, Solidity, Python, Go

Frameworks: NextJS, TailwindCSS, ReactJS, React Native, ExpressJS, Flask

Technologies: Docker, React Query, Redux, Jest, JUnit, Styled Components, GraphQL
